

Kenneth L Londoner

**Email:** [kennethllondoner@gmail.com](mailto:kennethllondoner@gmail.com)

*Kenneth L Londoner **founded the company BioSig Technologies** in February 2009. This is a medical device company, which has developed the PURE EP, a surface electrocardiogram (ECG) and an intracardiac multichannel recording and analysis system. The PURE EP System is designed to improve Atrial Fibrillation and Ventricular Tachycardia.*

*BioSig **received FDA 510(k) clearance** for the PURE EP™ System.*

*Additionally, he is the Managing Partner of Endicott Management Partners, LLC, a firm that assists emerging growth companies in their corporate development and investing needs since 2004.*

*Previously, Kenneth L Londoner has served as the executive vice president of NewCardio, Inc., a Silicon Valley-based cardiac software company. He has held this position from April 2007 to October 2009.*

*Londoner has held a position as Director and the architect for the turnaround at Alliqua BioMedical, Inc., from May 2012 to March 2014. Furthermore, Kenneth co-founded the port security and logistics company Safe Ports Holdings, LLC, in Charleston, South Carolina. He serves as a member of the board of Directors of the Safe Ports Board.*

*Moreover, Kenneth L Londoner was the founder and managing partner of Red Coat Capital Management, a hedge fund founded in late 1996. This hedge fund has grown from its initial base of \$ 2 million in assets to a peak of \$ 1.1 billion.*

### Endicott Management Partners, LLC

2004

#### Managing Partner

Endicott Management Partners, LLC assists emerging growth companies in their corporate development and investing needs.

### BioSig Technologies

2009

#### Founder and CEO

BioSig Technologies is a medical device company, which has developed the PURE EP™ System. This system is designed to assist electro physiologists in making crucial clinical decisions in real-time. The system acquires and displays high-fidelity cardiac signal recordings even at undetectable levels with high accuracy. This helps in the identification of the appropriate catheter ablation targets - areas of tissue to destroy that create a heart rhythm disturbance (arrhythmia).
